TOXICOLOGY

VOLUME CONTENTS

Volume 75 (1992)

The acute phase response of rats to soman intoxication **(The organophosphate can elicit an acute phase response)**
by L. Ševaljević, G. Poznanović and S. Ivanović-Matić (Belgrade, Yugoslavia) 1–12

Effect of chronic consumption of methylparathion on rat brain regional acetylcholinesterase activity and on levels of biogenic amines **(Besides acute inhibitory effects chronic administration causes moderate AChE inhibition in the CNS)**
by M.V. Shailesh Kumar and T. Desiraju (Bangalore, India) 13–20

Absence of interactions on hepatic retention and 7-ethoxyresorufin-*O*-deethylation activity after co-administration of 1,2,3,7,8-pentachlorodibenzo-*p*-dioxin and 2,4,5,2′,4′,5′-hexachlorobiphenyl **(The substituted biphenyl does not influence the distribution of or enzyme induction by the dioxin)**
by J. De Jongh, F. Wondergem, W. Seinen and M. Van den Berg (Utrecht, The Netherlands) .. 21–28

Modulation of calciuria by cadmium pretreatment in rats with cadmium-metallothionein-induced nephrotoxicity **(A 5-day treatment with cadmium chloride prevents toxic proteinuria, calcium excretion and urinary enzyme increases)**
by T. Jin, M. Nordberg and G.F. Nordberg (Umeå and Stockholm, Sweden) 29–37

Effects of 2,5-hexanedione on the ovary and fertility. An experimental study in mice **(Chronic application in drinking water at 1.5 per cent produces a minor effect on reproduction)**
by G. Siracusa, A. Bastone, M. Sbraccia, L. Settimi, C. Mallozzi, E. Monaco and N. Frontali (Rome, Italy) 39–50

Cadmium-induced hepatic endothelial cell injury in inbred strains of mice **(Endothelial cells of sensitive mice are more susceptible to Cd injury in vitro, suggesting that the microvasculature is an important determinant in hepatic Cd toxicity)**
by J. Liu, W.C. Kershaw, Y.P. Liu and C.D. Klaassen (Kansas City, KS) 51–62

Liver δ-aminolevulinate dehydratase activity in amitriptyline- or chlorpromazine-treated rats **(Thirty daily injections of these drugs decrease the hepatic enzyme activity but do not change total hepatic heme levels)**
by E. Sürmen and F.G. Eryürek (Istanbul, Turkey) 63–69

The relative effects of hypoxic hypoxia and carbon monoxide on brain function in rabbits **(Carbon monoxide is suggested to have cerebral effects of its own unrelated to oxygen deprivation)**
by G.L. Ludbrook, S.C. Helps, D.F. Gorman, P.L. Reilly, J.B. North and C. Grant (Adelaide, Australia; Auckland, New Zealand) 71–80

Endrin-induced urinary excretion of formaldehyde, acetaldehyde, malondialdehyde and acetone in rats **(The metabolites may serve as biomarkers for exposure assessment to xenobiotics that induce oxidative stress)**
by D. Bagchi, M. Bagchi, E. Hassoun and S.J. Stohs (Omaha, NE) 81–89

Book Review 91–93

Announcements 95–96

Effects of feeding and fasting on hepatolobular distribution of glutathione and cadmium-induced hepatotoxicity **(Analysis of histochemically stained liver slices with computerized densitometry)**
by M. Shimizu and S. Morita (Osaka, Japan) 97–107

Effects of 2,3,7,8-tetrachlorodibenzo-*p*-dioxin or 2,2′,4,4′,5,5′-hexachlorobiphenyl on vitamin K-dependent blood coagulation in female germfree WAG/Rij-rats **(HxCB but not TCDD prolongs coagulation time possibly by increased cytochrome P450-dependent elimination of vitamin K)**
by C.A. Bouwman, W. Seinen, J.G. Koppe and M. van den Berg (Utrecht and Amsterdam, The Netherlands) 109–120

Acute renal and hepatic toxicity of 2-haloanilines in Fischer 344 rats **(Halogen substitution at the 2-position of aniline increases hepatic and renal toxicity)**
by M.A. Valentovic, J.G. Ball, D.K. Anestis, K.W. Beers, E. Madan, J.L. Hubbard and G.O. Rankin (Huntington, VA) 121–131

Interaction of cadmium with atrial natriuretic peptide receptors: implications for toxicity **(Cadmium produces changes in ANP receptor density in kidney and aorta and altered receptor regulation in cells)**
by J. Giridhar, A. Rathinavelu and G.E. Isom (West Lafayette, IN) 133–143

Effect of cigarette smoking on salivary epidermal growth factor (EGF) and EGF receptor in human buccal mucosa **(Cigarette smoking reduces salivary EGF levels and impairs the function of the buccal EGF receptor)**
by S.-L. Wang, M. Milles, C.-Y. Wu-Wang, G. Mardirossian, C. Leung, A. Slomiany and B.L. Slomiany (Newark, NJ) 145–157

Subacute ethanol consumption reverses *p*-xylene-induced decreases in axonal transport **(Ethanol consumption may modulate xylene neurotoxicity, perhaps due to induction of biotransformation processes)**
by S. Padilla, D.L. Lyerly and C.N. Pope (Research Triangle Park, NC; Monroe, LA) 159–167

Further studies on the hematopoietic damage produced by a single dose of T-2 toxin in mice **(A significant degree of bone marrow toxicity is produced by T-2 toxin at a dose as low as 0.3 mg/kg)**
by G.C. Faifer, O. Zabal and H.M. Godoy (Castelar, Argentina) 169–174

The role of metabolism in carbon tetrachloride-mediated immunosuppression. In vitro studies **(Immunotoxicity by CCl_4 requires metabolic activation)**
by N.E. Kaminski and W.D. Stevens (Richmond, VA) 175–188

Announcements 189

Effect of endosulfan (thiodan) on vitellogenesis and its modulation by different hormones in the vitellogenic catfish *Clarias batrachus* **(Endosulfan impairs vitellogenin synthesis by interfering with hormones that regulate its synthesis)**
by S. Chakravorty, B. Lal and T.P. Singh (Varanasi, India) 191–198

A subpopulation of 12-*O*-tetradecanoylphorbol-13-acetate-induced papillomas is not inhibited by retinoic acid **(Tumor size differentiates between sensitive and insensitive skin tumors in mice)**
by T.C. Islam and R. Toftgård (Huddinge, Sweden) 199–208

Characterization of the toxicity of distamycin derivatives on cancer cell lines and rat heart **(Distamycin A derivatives show elevated cytotoxicity but no cardiotoxicity)**
by C. Agen, A.M. Sironi, R. Danesi, M. Costa, N. Bernardini, A. Paparelli, P. Della Torre and M. Del Tacca (Pisa and Milan, Italy) 209–219

Individual serum bile acids as early indicators of carbon tetrachloride- and chloroform-induced liver injury **(Increase of particular bile acids in serum seems to be a more sensitive parameter for liver damage than the conventionally measured serum enzyme activities)**
by C.-l. Bai, P.J. Canfield and N.H. Stacey (Sydney, Australia) 221–234

Assessment of the immunotoxic potential of the fungicide dinocap in mice **(Relatively modest immunotoxicity is seen at high exposure levels)**
by R.J. Smialowicz, R.W. Luebke and M.M. Riddle (Research Triangle Park, NC) 235–247

Prevention of the acute neurotoxic effects of phenytoin on rat peripheral nerve by H7, an inhibitor of protein kinase C **(These experiments suggest a connection between protein phosphorylation and the action potential depressing effect of phenytoin)**
by Á. Raya, J. Gallego, C. Hermenegildo, F.J. Puertas, F.J. Romero, V. Felipo, M.D. Miñana, S. Grisolía and J. Romá (Valencia, Spain) 249–256

Murine strain differences in metabolism and bladder toxicity of cyclophosphamide **(Strain differences may arise from variation in the oxidative metabolism and from intrinsic factors within the bladder tissue)**
by L. Fraiser and J.P. Kehrer (Austin, TX) 257–272

Contents of Journals Relating to Toxicology 273–278
Subject Index Volume 75 279–282
Author Index Volume 75 283
